# IMPORT MASINA VIRTUALA TAILS OS

- Instalare VirtualBox-7.0.18
- Import masina virtuala
- Verificare resurse (MINIM: 2G RAM + 2vcpus)

---

Tips:

- Instalarea VirtualBox se face in C:
- Pentru folderul masinii virtuale se creaza un folder nou intr-un spatiu de lucru ales.

## Appliance settings

These are the virtual machines contained in the appliance and the suggested settings of the imported VirtualBox machines. You can change many of the properties shown by double-clicking on the items and disable others using the check boxes below.

### Virtual System 1

	Name	tailsos1
	Guest OS Type	Debian (64-bit)
	CPU	4
	RAM	4096 MB
	DVD	✓
	USB Controller	✓
	Sound Card	✓ ICH AC97

Machine Base Folder:

C:\Users\kilimanjaro\VirtualBox VMs

MAC Address Policy:

Include only NAT network adapter MAC addresses

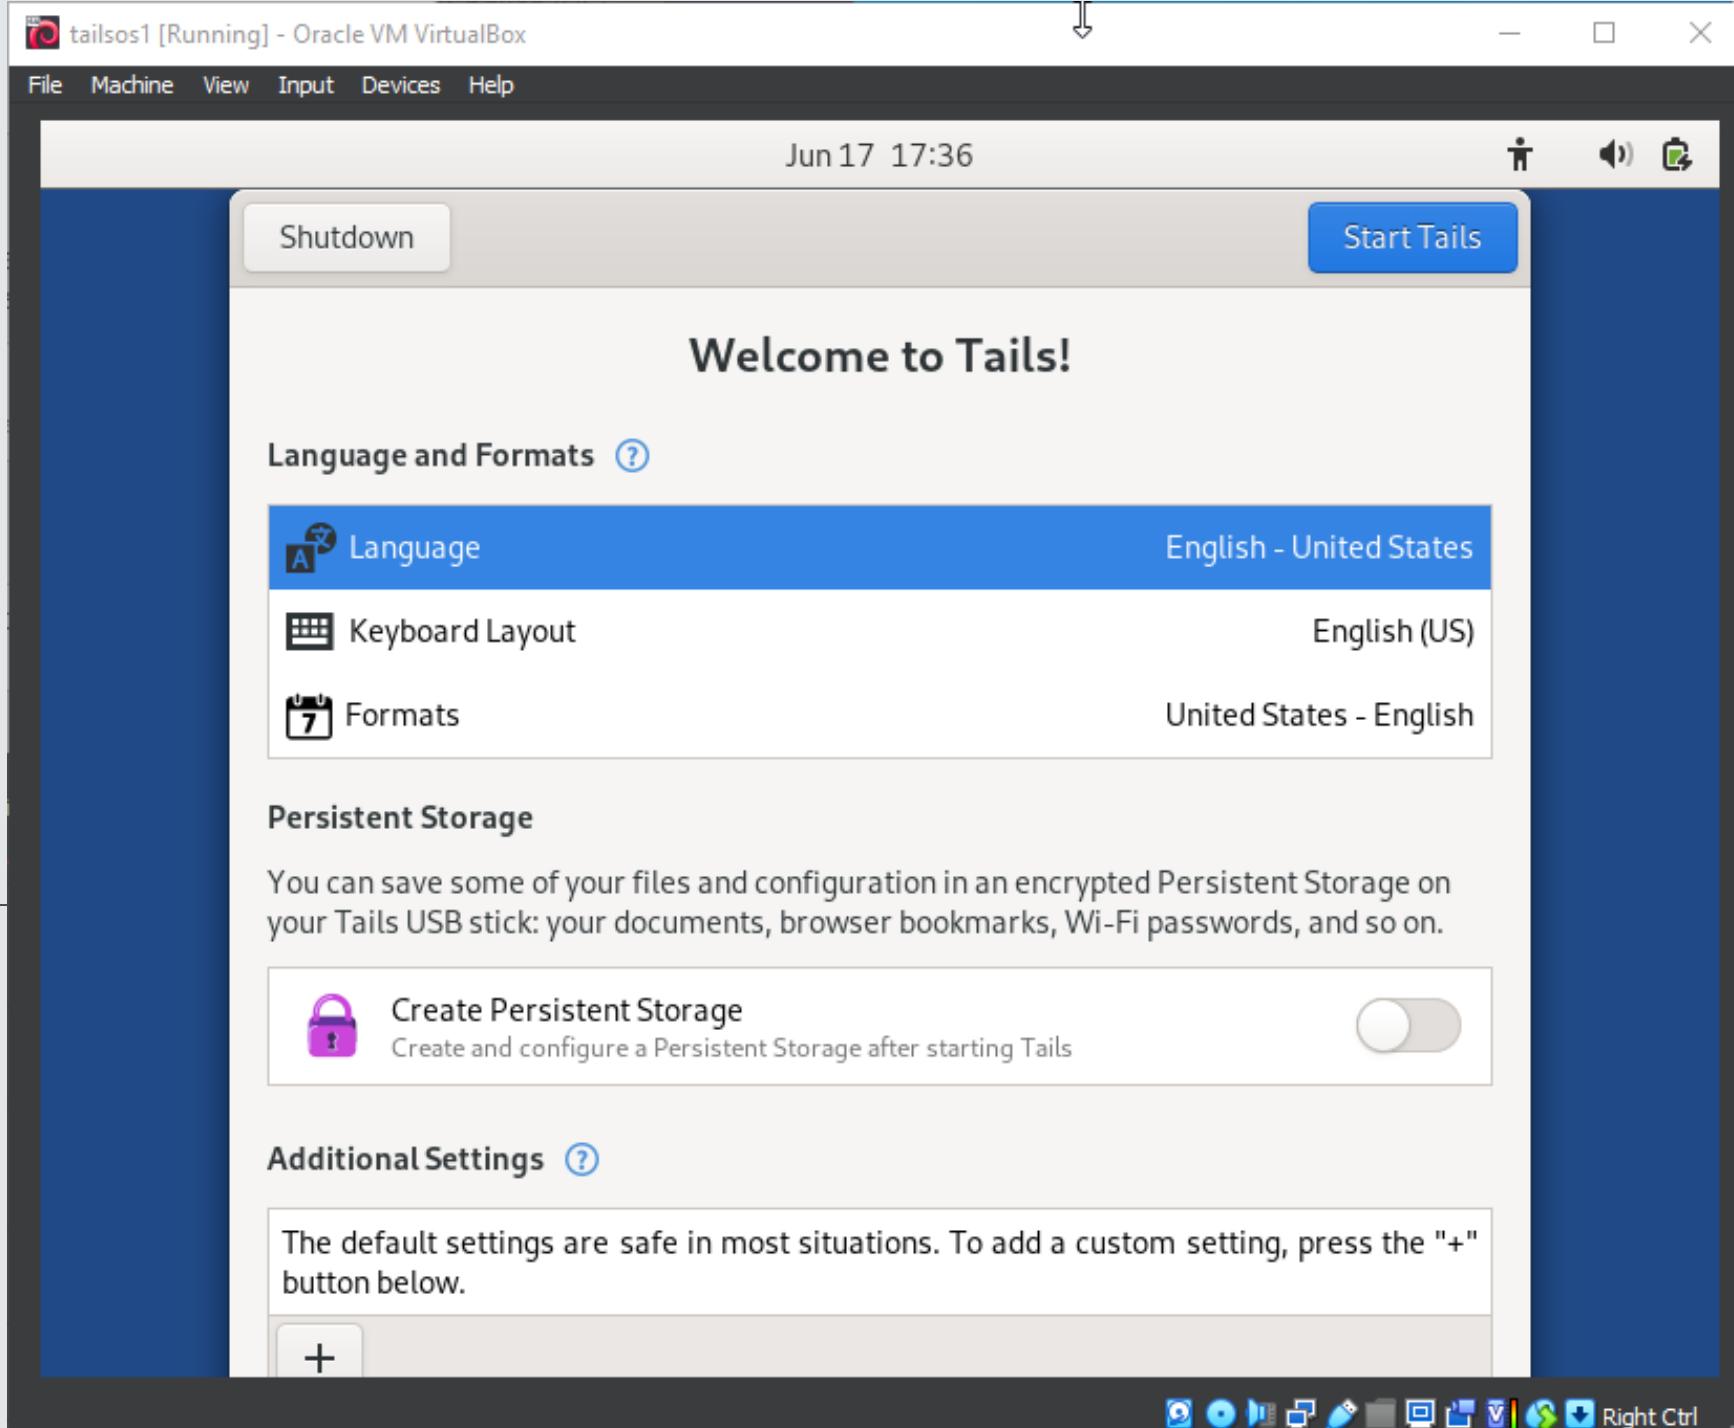

Additional Options:  Import hard drives as VDI

## Tor Connection

Everything you do on the Internet from Tails goes through the Tor network.

Tor encrypts and anonymizes your connection by passing it through 3 relays.

Tor relays are servers operated by different organizations and volunteers around the world.

**Connect to Tor automatically** 

We recommend connecting to Tor automatically if you are on a public Wi-Fi network or if many people in your country use Tor to circumvent censorship.

Configure a Tor bridge 

**Hide to my local network that I'm connecting to Tor** 

You might need to go unnoticed if using Tor could look suspicious to someone who monitors your Internet connection.

## Add the Bridges

[Add the Bridges](#)

# Get Bridges!

BridgeDB can provide bridges with several types of [Pluggable Transports](#), which can help obfuscate your connections to the Tor Network, making it more difficult for anyone watching your internet traffic to determine that you are using Tor.

Some bridges with IPv6 addresses are also available, though some Pluggable Transports aren't IPv6 compatible.

Additionally, BridgeDB has plenty of plain-ol'-vanilla bridges — without any Pluggable Transports — which maybe doesn't sound as cool, but they can still help to circumvent internet censorship in many cases.

[Just give me bridges!](#)

Sector size (logical/physical): 4096 bytes / 4096 bytes

I/O size (minimum/optimal): 4096 bytes / 4096 bytes

root@amnesia:~# fdisk /dev/sdb

Welcome to fdisk (util-linux 2.38.1).

Changes will remain in memory only, until you decide to write them.

Be careful before using the write command.

Device does not contain a recognized partition table.

Created a new DOS (MBR) disklabel with disk identifier 0x9e081fe2.

Command (m for help): n

Partition type

  p  primary (0 primary, 0 extended, 4 free)  
  e  extended (container for logical partitions)

Select (default p): p

Partition number (1-4, default 1):

First sector (2048-19583, default 2048):

Last sector, +/-sectors or +/-size{K,M,G,T,P} (2048-19583, default 19583):

Created a new partition 1 of type 'Linux' and of size 8.6 MiB.

Command (m for help): w

The partition table has been altered.

Calling ioctl() to re-read partition table.

Syncing disks.

root@amnesia:~#

## Tor Connection

Everything you do on the Internet from Tails goes through the Tor network.

Tor encrypts and anonymizes your connection by passing it through 3 relays.

Tor relays are servers operated by different organizations and volunteers around the world.

- Connect to Tor automatically** [?](#)

We recommend connecting to Tor automatically if you are on a public Wi-Fi network or if many people in your country use Tor to circumvent censorship.

- Hide to my local network that I'm connecting to Tor** [?](#)

You might need to go unnoticed if using Tor could look suspicious to someone who monitors your Internet connection.

[Learn more about how Tails connects to Tor](#)

## Tor Connection

### Configure a Tor bridge

Bridges are secret Tor relays. Use a bridge as your first Tor relay if accessing Tor is blocked from where you are.

[Learn more about Tor bridges](#)

- Use a default bridge
- Ask for a Tor bridge by email

Send an empty email to [bridges@torproject.org](mailto:bridges@torproject.org) from a Gmail or Riseup email address with your phone and scan the QR code that is attached to the automatic reply.

Scan QR code
- Enter a bridge that you already know

Bridge

To save your bridge, [create a Persistent Storage](#) on your Tails USB stick.

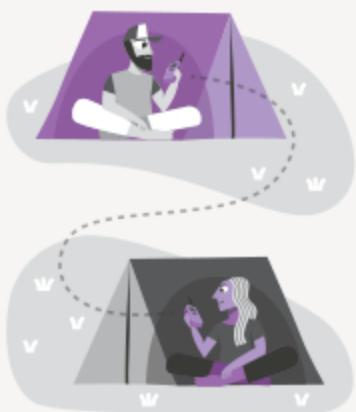

[Back](#) [Connect to Tor](#)

SSL Certificate Verification

Accept certificate for  
4colmnerbjz3xtsjmqogehtpb5upjzef57huilibrq3wfgpsylub7yd.onion?

The certificate for  
4colmnerbjz3xtsjmqogehtpb5upjzef57huilibrq3wfgpsylub7yd.onion could not be validated.

The certificate claims to be from "dismail.de" instead. This could mean that you are not connecting to the service you believe you are.

The screenshot shows a configuration dialog for the "Off-the-Record Messaging" plugin. The dialog has tabs for "Config" and "Known fingerprints", with "Config" selected. It displays a section for "My private keys" showing a placeholder for a key for account "kokojimmy1@dismail.de/ (XMPP)" with the message "No key present" and a "Generate" button. Below this are "Default OTR Settings" with checkboxes for "Enable private messaging" (checked), "Automatically initiate private messaging" (unchecked), "Require private messaging" (unchecked), and "Don't log OTR conversations" (checked). At the bottom are "OTR UI Options" with a checked checkbox for "Show OTR button in toolbar". A "Close" button is at the bottom right.

### Authenticate Buddy

Authenticate **kokojimmy2@dismail.de**

Authenticating a buddy helps ensure that the person you are talking to is who he or she claims to be.

How would you like to authenticate your buddy?

Question and answer

To authenticate using a question, pick a question whose answer is known only to you and your buddy. Enter this question and this answer, then wait for your buddy to enter the answer too. If the answers don't match, then you may be talking to an imposter.

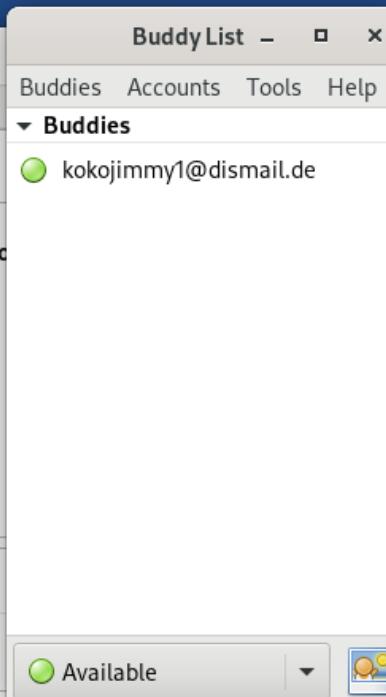

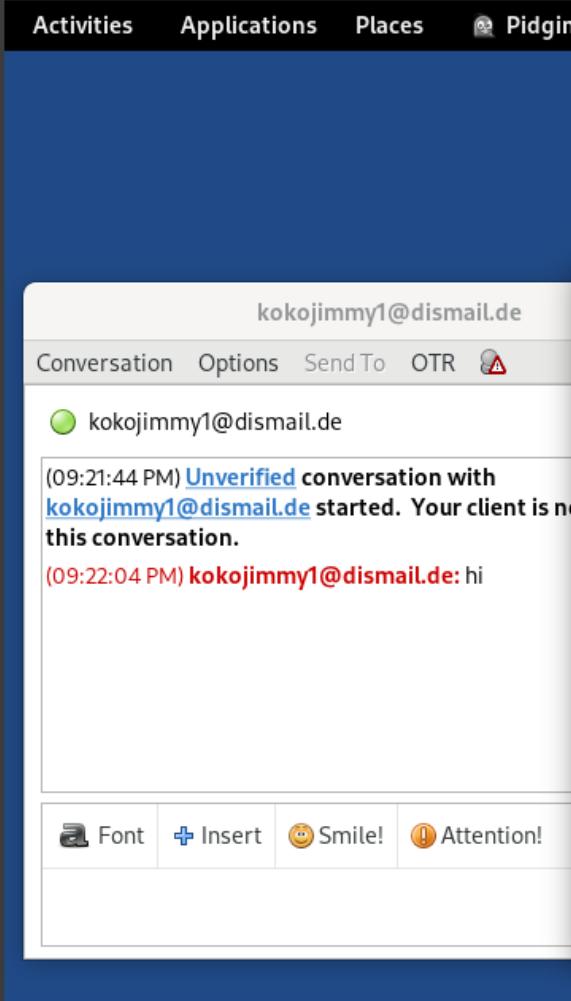

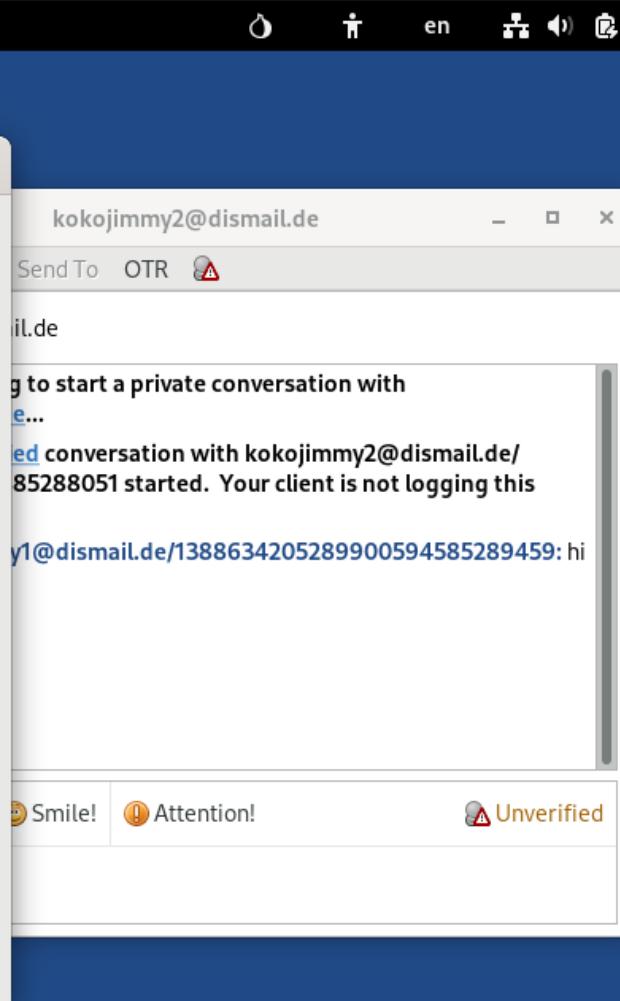

Enter question here:

where did we meet?

Enter secret answer here (case sensitive):

constant

### Authenticate Buddy

Authentication from **kokojimmy1@dismail.de**

Authenticating a buddy helps ensure that the person you are talking to is who he or she claims to be.

Your buddy is attempting to determine if he or she is really talking to you, or if it's someone pretending to be you. Your buddy has asked a question, indicated below. To authenticate to your buddy, enter the answer and click OK.

This is the question asked by your buddy:  
**where did we meet?**

Enter secret answer here (case sensitive):

Cancel

## **Format Volume**

Next

Volume Name

koko

For example: "Angela's Files" or "Backup".

Erase

Overwrites existing data, but takes longer.

### Type

- Internal disk for use with Linux systems only (Ext4)

Password protect volume (LUKS)

For use with Windows (NTFS)

For use with all systems and devices (FAT)

You have imported a new certificate (public key)

poza2copy.j  
pg

In order to mark the certificate as valid (green) it needs to be certified.  
Certifying means that you check the Fingerprint.

Some suggestions to do this are:

A phone call to the person.

Using a business card.

Confirming it on a trusted website.

Do you wish to start this process now?

Do not ask again

The screenshot shows the OnionShare application window. The title bar reads 'OnionShare'. The main area is titled 'Share Files' and displays a single file: 'johnwick2\_0xB3595814\_public.asc' (2.4 KiB). Below the file list is a red button labeled 'Stop sharing'. A note below the button states: 'Anyone with this OnionShare address can download your files using the Tor Browser: ⓘ'. The onion address is listed as <http://onionshare:juiciness-uncouple@zxnuv5mr6h2jqxagmgf7yhg5pxqyhiflx24glmmgu4b4a4u3cvzuxlqd.onion>. At the bottom, there is a blue 'Copy Address' button.

SIZE

2.4 KiB

A screenshot of a Linux desktop environment, likely Arch Linux, showing a terminal window and a GPG key manager application.

The terminal window (title: "Terminal") shows the following command-line session:

```
root@amnesia:~# cd /home/amnesia/Tor\ Browser/
root@amnesia:/home/amnesia/Tor Browser# ls
johnwick2_0xB3595814_public.asc
root@amnesia:/home/amnesia/Tor Browser# gpg --import johnwick2_0xB3595814_public
.asc
gpg: key 9DD2CB41B3595814 was created 19725 seconds in the future (time warp or
clock problem)
gpg: key 9DD2CB41B3595814 was created 19725 seconds in the future (time warp or
clock problem)
gpg: key 9DD2CB41B3595814 was created 19725 seconds in the future (time warp or
clock problem)
gpg: key 9DD2CB41B3595814 was created 19725 seconds in the future (time warp or
clock problem)
gpg: key 9DD2CB41B3595814: new key but contains no user ID - skipped
gpg: Total number processed: 1
      w/o user IDs: 1
root@amnesia:/home/amnesia/Tor Browser#
```

The GPG key manager application window (title: "Smartcards") is open, showing the "Imported Certificates" tab selected. It displays a list of imported certificates, including the one just imported:

Valid Until	Key-ID
tom	9DD2CB41B3595814

IF YOU HAVE THIS ERROR , THE PROBLEM  
IS PROBABLY THE TIMING

## OpenPGP Certificate Export

When OpenPGP certificates have been exported to a public directory server, it is nearly impossible to remove them again.

Before exporting your certificate to a public directory server, make sure that you have created a revocation certificate so you can revoke the certificate if needed later.

Are you sure you want to continue?

Do not ask again

[Cancel](#)

[Continue](#)

The screenshot shows a desktop environment with several windows open. In the foreground, there are two Thunar file manager windows. The left one is titled '[personal] Downloads - Thunar' and shows a folder named 'Facultatea de Matematică și Informatică\_files' containing an HTML file. The right one is titled '[work] personal - Thunar' and shows a folder named 'personal' containing several system configuration files like 'sys-firewall', 'sys-net', etc. A context menu is open over the 'personal' folder in the right Thunar window. In the background, there's a Mozilla Firefox browser window displaying the Fedora Project website. A system tray icon for 'Audio Input' is visible, showing 'dom0:mic - Microphone'. The top panel also displays various system icons and the date/time.

The screenshot shows a desktop environment with multiple windows:

- A "Settings" window is open in the foreground, showing "Settings Manager" and "Xfce Terminal" options.
- A "Thunar" file manager window is visible in the background, showing a folder structure.
- A "Mozilla Firefox" window is also visible in the background, displaying the Fedora Project homepage.

At the bottom of the screen, a dark overlay window displays a message in Romanian:

The screenshot shows a Linux desktop environment with a yellow-themed window manager. A Thunar file manager window is open, displaying the contents of the user's Downloads directory. The 'Downloads' folder is highlighted in blue. A context menu is open over a file named 'file-sample\_100kB.doc'. The menu includes options like 'Open With LibreOffice Writer', 'Open With Other Application...', 'Set Default Application...', 'Send To', 'Cut', 'Copy', 'Paste', 'Move to Trash', 'Rename...', 'Create Archive...', 'Copy to other qube', 'Move to other qube', 'Open in other qube', 'Edit in disposable qube', 'View in disposable qube', and 'Properties...'. A tooltip at the bottom of the menu says 'Use "LibreOffice Writer" to open the selected file'. The desktop bar at the top shows various application icons and the date/time 'Thu 20 Jun, 15:28'. A message in the top right corner indicates that a Qube named 'disp1171' has shut down.
